New Issue Summary

Sale Date: Aug. 29, 2018

Series: \$327,530,000 various purpose general obligation (GO) bonds, series 2019A; \$101,205,000 motor vehicle fuel tax GO bonds, series 2019B; and \$145,780,000 GO bonds, series 2019T (taxable)

Purpose: New money

Security: General obligation

Analytical Conclusion

Washington's 'AA+' GO bond rating and Issuer Default Rating (IDR) reflect the state's solid economy and revenue growth prospects, a demonstrated commitment to fiscal balance, and combined long-term liabilities that place a low burden on resources despite an above-average debt load. Fitch Ratings believes that strong budget control will allow the state to continue to address challenges while maintaining fundamental financial flexibility even at times of economic and revenue decline.

Key Rating Drivers

Revenue Framework: 'aaa'

Washington relies on broad consumption-based revenues to fund operations and does not levy an income tax. This revenue mix results in collections that quickly reflect consumer spending and construction trends. Revenue performance over time has generally tracked economic performance, and Fitch expects this to continue to support solid growth prospects. The state has complete independent control over taxation, with an essentially unlimited legal ability to raise operating revenues as needed.

Expenditure Framework: 'aa'

Washington benefits from solid expenditure flexibility with a low burden of carrying costs for debt service and retiree benefits and the broad expense-cutting authority common to most U.S. states. Education is a key cost driver, as is Medicaid, but Fitch expects these costs to remain manageable.

Long-Term Liability Burden: 'aaa'

The combined burden of debt plus pensions is low as a percentage of personal income, although above the median for U.S. states. Elevated debt ratios incorporate the funding of substantial capital needs, particularly for transportation, but are offset by a moderate net pension liability.

Operating Performance: 'aa'

Washington has responsive financial management and very strong gap-closing capacity. In a moderate economic downturn, Fitch expects the state would act in line with historical practice, drawing down reserves and managing revenues and spending to maintain balance and overall financial flexibility. As conditions improve, the state replenishes its cushion against future underperformance. The initiative and referendum environment creates some uncertainty, but this is limited by the legislature's authority to amend or repeal any law approved by voters in this manner.

Rating Sensitivities

Solid Financial and Liability Management: The rating is sensitive to shifts in Washington's fundamental credit characteristics, including a low liability burden supported by an increased focus on debt affordability. The rating assumes that the state will continue to address budgetary challenges, such as recent increases in K–12 education funding requirements, in a sustainable manner.

Credit Profile

Washington's economy, historically reliant on manufacturing supplemented by regional and international trade and tourism, has broadened. Areas of concentration, including Boeing and Microsoft, offer relatively high-wage employment, and the population is well educated. In addition, population growth has far exceeded the U.S. average, a trend that seems likely to continue.

The state's recovery from the Great Recession has been significantly more robust than that of the U.S. and among the strongest of the states. The state's unemployment rate is slightly above the U.S., while labor force growth has also been ahead of the national pace.

Revenue Framework

Washington's revenue structure is based on a retail sales tax (about half of state general fund tax revenues) and, to a much lesser extent, a business and occupation gross receipts tax (about 20%) and state property tax (10%-15%). The importance of the real estate excise tax (a projected 5% of tax revenues in the current biennium) varies considerably depending on the point in the economic cycle. The state does not have an income tax.

This revenue structure makes the state budget sensitive to trends in consumer spending. In addition, construction (labor and materials) is assessed under the broad sales tax and receipts are significant to sales tax revenue performance. Fitch expects revenues to continue to reflect cyclical trends and the state's ongoing population growth.

Like most states, Washington has complete independent legal ability to control taxes, a significant credit strength. A 2013 state Supreme Court decision found a prior ²/₃ legislative vote requirement for tax increases to be unconstitutional, making it easier to raise revenues. A November 2015 initiative that attempted to re-establish the restriction by other means also was found to be unconstitutional.

Expenditure Framework

As in most states, education and health and human services are Washington's largest operating expenses. Education is the larger line item, with state funding for local school districts and the public university and college system accounting for more than half of state general fund expenditures. Human services programs represent another one-third.

Washington's spending growth, absent policy actions, will likely be marginally above revenue growth, requiring regular budget management to ensure ongoing balance. The ongoing fiscal challenge of Medicaid is common to all U.S. states. Federal action to revise Medicaid's programmatic and financial structure remains a possibility given recent federal legislative and administrative efforts. Most proposals to date include a basic restructuring of federal Medicaid funding to a capped amount. Whether a change in federal Medicaid funding has consequences for Fitch's assessment of a state's credit quality would depend on the state's fiscal response to those changes. Responses that create long-term structural deficits or increase liability burdens could negatively affect both the expenditure framework assessment and the state's 'AA+' IDR.

Related Criteria

U.S. Public Finance Tax-Supported Rating Criteria (April 2018)

Washington retains solid expenditure flexibility. While Medicaid costs are somewhat beyond the state's ability to materially change given federal requirements for the program, the state's carrying costs for liabilities are low. Like most states, Washington's operating budget (outside of Medicaid) goes largely toward funding of services rather than direct service delivery, allowing the state to shift costs to lower levels of government in times of fiscal stress. This is true even for education spending, as the state appropriates money to local school districts rather than operating any schools itself; however, given recently resolved litigation related to school funding, Fitch considers the state's ability more limited to reduce spending in this area than in some other states.

Long-Term Liability Burden

On a combined basis, Washington's burden of direct debt and adjusted net pension liabilities, at 7.8%, is above the 6% median for U.S. states (both figures per Fitch's special report "Pensions Driving State Liability Burdens (2017 State Pension Update)," dated Dec. 12, 2017). Debt levels are more than twice the U.S. state median while pension liabilities are below average. The combined liabilities place a low burden on the state's resource base, and Fitch expects this to remain so even given the state's large capital projects.

Washington's debt equals about two-thirds of Fitch adjusted long-term liabilities and is primarily GO. Capital needs are substantial, particularly for transportation. The state has repeatedly demonstrated its ability and willingness to raise revenues in support of transportation capital investment, most recently through a gas tax increase in the 2015 session. Tolling has also been utilized as part of the funding solution.

The state has increased its focus on debt affordability in recent years. In November 2012, voters approved a constitutional amendment that tightened the constitutional debt limit, which limits annual debt service as a percentage of revenues.

The state administers 14 defined benefit retirement plans, three of which have hybrid defined benefit/defined contribution components; most are multi-employer, with the state participating as either an employer or a non-employer contributing entity in all but one of the plans. Based on the state's fiscal 2017 financial statements, aggregate fiduciary pension assets covered 87% of total pension liabilities on a reported basis, based on a 7.5% investment return assumption for most of the plans. This ratio would fall to an estimated 72% based on Fitch's more conservative 6% investment return assumption. Two plans for general government employees (PERS1, closed in 1977, and PERS2/3), account for the bulk of the state's direct net pension liability.

The state has effectively made changes to manage pension costs, and a Supreme Court decision in 2014 upheld the elimination of cost of living adjustments that had been subject to long-standing legal challenge. The state has deferred full contributions to the closed pension systems in times of economic strain.

Other post-employment benefits (OPEB) are limited and funded on a pay-as-you-go basis.

Contingent liabilities include a school district credit enhancement program that provides a GO guarantee to \$12.5 billion in outstanding school district debt as of June 1, 2018. The enhancement has never been called upon.

Operating Performance

Frequent reviews of economic and financial forecasts allow the state to respond effectively to changing conditions. For details, see Scenario Analysis, page 5.

Budgeting has remained challenging and sometimes contentious even in the current recovery, in part due to recent K-12 demands related to the McCleary education lawsuit and a statutory

mandate that the budget show projected balance over a four-year period rather than just the current biennium. However, the state has taken advantage of this time of growth to rebuild financial flexibility.

As the economy and revenues have recovered solidly, Washington has replenished reserves and strengthened reserve funding mechanisms. The state ended the fiscal 2015–2017 biennium on June 30, 2017 with reserves of \$2.79 billion (including the general fund ending balance and the budget stabilization account), equal to 14.4% of tax revenues, or 8.9% of total general fund and related fund spending (including federal funds), in fiscal 2017. The state's most recent forecast for the current 2017–2019 biennium includes an increase in reserves to \$2.91 billion, equal to 13.6% of projected tax revenues and 8.1% of projected spending at the end of fiscal 2019. This forecast improves upon the \$2.37 billion reserve balance assumed in the enacted biennium budget, largely due to strong revenue performance.

The state has solid funding provisions for its budget stabilization account (BSA). The constitutional account was approved by voters in 2007. The BSA receives 1% of revenues off the top every year, capped at 10% of annual general revenues. In 2011, voters approved another constitutional amendment that requires any extraordinary growth in state revenue (defined as growth in general state revenues that exceeds by one-third the average biennial growth of the prior five biennia) be transferred to the BSA on top of the 1%. This measure also serves to limit the impact of revenue volatility on the operating budget.

Washington's initiative and referendum environment creates a level of operating and financial uncertainty. However, it is significant that any law approved by voters in this manner can be amended or repealed by the legislature by a two-thirds vote in the first two years after approval and by a simple majority thereafter. The legislature repeatedly has shown the ability and willingness to suspend initiatives. The state constitution may not be amended by initiative or referendum.

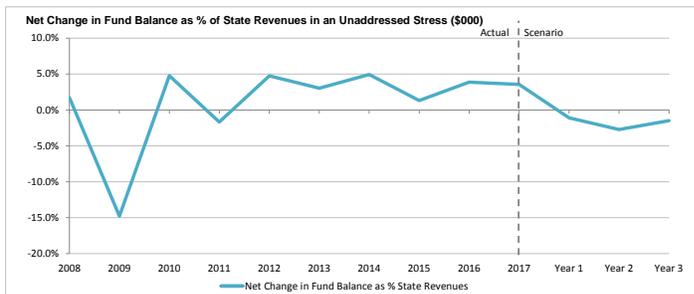

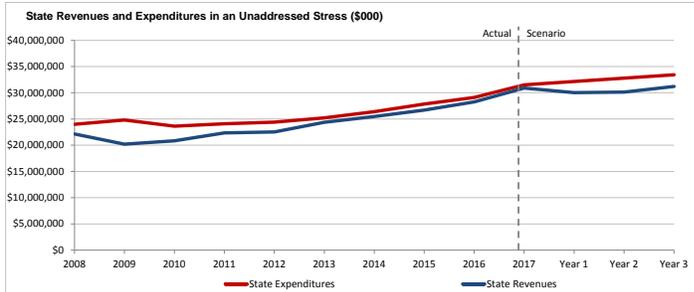

Current Developments

Washington's recently adopted supplemental budget provides \$702 million in new funding for K–12 education for the 2018–2019 school year, adding to the \$1.8 billion in new education funding included in the enacted biennium budget and funded primarily from increased property taxes and one-time reserves. These funding increases are in response to the long-running McCleary education lawsuit, which the state Supreme Court has now declared resolved. Washington also adopted a full capital budget for the 2017–2019 biennium this year after the legislature adjourned in 2017 without taking action. Revenue performance continues to be strong, and the state's June 2018 forecast projects a 3.9% increase in general fund revenues compared to the February 2018 forecast, supported by growth in all major tax revenues.

Washington, State of (WA)

Scenario Analysis

v. 2.0 2017/04/14

Analyst Interpretation of Scenario Results:

Frequent reviews of economic and financial forecasts allow the state to respond effectively to changing conditions. As the economy and revenues repeatedly and significantly underperformed estimates in the great recession, the state demonstrated its willingness and ability to take actions in response. The state implemented a combination of ongoing and one-time actions, and fully depleted accumulated reserves. Fitch expects the state to similarly make use of its very strong gap-closing capacity during future cyclical downturns.

Notes: Scenario analysis represents an unaddressed stress on issuer finances. Fitch's downturn scenario assumes a -1.0% GDP decline in the first year, followed by 0.5% and 2.0% GDP growth in Years 2 and 3, respectively. Expenditures are assumed to grow at a 2.0% rate of inflation. For further details, please see Fitch's US Tax-Supported Rating Criteria.

In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed.

The information in this report is provided "as is" without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US\$1,000 to US\$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US\$10,000 to US\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.
